

Turkish Aerospace

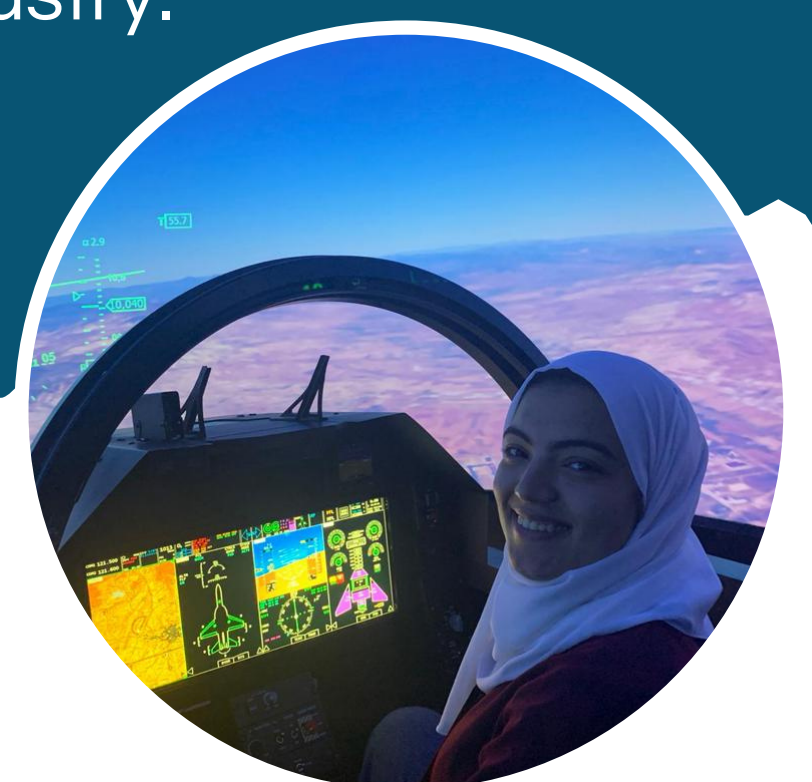

Practical Training - Summer 2022

- I worked as an intern in the system engineering department, where I focused on software and hardware considerations for airborne systems.

- I was responsible for using coding standards for encoding and decoding ARINC 429 word for the Hürkuş aircraft.
- I had the opportunity to network with other interns from Qatar University and other universities.

- I also had the privilege of meeting with engineers from different departments within the Turkish Aerospace company, which provided me with valuable insights into the aerospace industry.
